1 Introduction

Bluebox DVDs expanding their business and wanted to create the data warehouse so that they can keep track of the information and take some better and quick decisions. The task is to create the entire data warehouse and reporting solution for the business. There are different files where business is storing all the information. We need to move the data to MySQL.

3 Business Logic

Remove Last Update date column from all the tables

Actor Table:

- Concatenate the first name and the last name of the actors

Address Table:

- Remove the address 2 column
- Postal code make it zero if null
- Phone number make it 0000000000 if null

Customer Table:

Concatenate first name and the last name of the customer

Replace the domain of the email from sakilacustomer.org to blueboxdvd.com

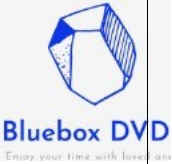

Remove create and last update columns

Film Table:

Remove original language id column

Convert the rating as below

Original Rating	Updated Rating
G	General Audience
PG	Parental Guidance
PG-13	Parents Strongly Cautioned
R	Restricted
NC-17	Adults only

Submission

- Detailed architecture diagram
- All the .sql file and .tfl file
- Create the end to end stored procedure and also create one wrapper stored procedure which will run all the stored procedure, share the .sql files of all those stored procedures.
- Create the Audit control as well the table structure of the audit control should be as below

OP_ID	SOURCE_NAME	TARGET_NAME	PROCESS_NAME	OPERATION_TYPE	SOURCE_COUNT	TARGET_COUNT	LOG_DETAILS	OPERATED_BY	OPERATION_DATE
-------	-------------	-------------	--------------	----------------	--------------	--------------	-------------	-------------	----------------

- Create at least 2 transformation layers
- Create the Tableau Dashboard which will give the entire 360 degree view of the customer and rental
